

# CITY OF NEW LONDON

## Land Value Tax Committee Implementation Plan

The City of New London's Land Value Tax Committee hereby submits this document as its recommended plan for the implementation of a Land Value Tax (LVT). This plan is predicated upon the premise that, in order for LVT to be most effective, it must be able to accomplish the following: (1) shift the tax burden onto the land, which is a municipality's valued resource; (2) stimulate new private development; and (3) combat blighted neighborhoods and areas of the City. It is the Committee's position that LVT should accomplish these goals, if possible, without having a significant adverse impact on existing and established residential, commercial, and industrial businesses and properties.

### I. Synopsis of Committee Activities:

The Committee began its charge on October 21, 2009. The Committee proceeded to elect a chairman and secretary, and the consensus was that it would operate and conduct itself under Robert's Rules of Order. It was determined that the Committee would meet at least once per week. At each meeting, it was decided that there would be a portion dedicated to accepting comments from members of the public.

The Committee was presented with four (4) LVT models that were provided by the Center for the Study of Economics. These models will be discussed in further detail below. Additionally, it was determined that, based upon the amount of time that would be needed to analyze the models, and to educate and learn about the pros and cons of LVT, that the Committee could not complete its job properly in order to meet the deadline of December 31, 2009, as set forth in Public Act 09-236. One of the first orders of business was to arrange for a letter to be sent to the Office of Policy and Management, with copies to certain State legislators, explaining the deadline concerns of the Committee, and seeking an extension of Public Act 09-236 until February 15, 2010. Because the Legislature was out of session, it was not possible to get an extension of the Public Act before the December 31, 2009. The Committee continued based upon best information and belief that its request for an extension to February 15, 2010 would be granted.

The Committee also voted (unanimously) that any LVT plan that may be implemented for the City of New London should apply City-wide, and should not apply to only one type of property or to only a few geographic areas (e.g. Central Business District only).

The Committee received several articles and written reports regarding LVT. Additionally, members of the Committee researched and studied LVT on their own, and brought more information and documentation to the entire Committee for its consideration during the regular weekly meetings. Some of the information that was prepared and provided to the Committee included the following:

1. Charts and graphs indicating the amount of tax "shift" to and from residential, commercial, and industrial properties in the City of New London under each of the four (4) plans.

2. Charts and graphs indicating the amount of additional tax burden/relief that each property in the City would experience under each of the four (4) models.

3. Maps indicating which properties throughout the City would realize an increase or decrease in its tax burden under the four (4) models.

After several weeks of analyzing the four (4) models and the impact and tax implications on City properties under each model, a fifth model was proposed to the Committee for consideration. This fifth model will be discussed in detail below with the other models.

The Committee established eleven (11) criteria that it considered important goals to achieve under LVT. The Committee ranked the criteria in their importance, and applied a grading system for the LVT models and the status quo to the criteria. A list of the criteria, and the results of the grading system are shown in Section 7 of Schedule A attached hereto.

In order to focus its analysis and discussion of an LVT plan that may be viable for the City, the Committee voted to discard three (3) of the five (5) models from consideration. Reasons for the discarding of these models was stated, and will be summarized below. The two (2) models that remained were commonly referred to as AXI(5%) and Site Specific Mill Rate (also referred to as "Plan #5). See Section II below for detailed analysis and explanation of these plans.

After discussion and analysis of the remaining two (2) models, the Committee took a vote whereby members could choose from the following choices:

- A. Plan AXI(5%)
- B. Plan #5
- C. Maintaining Status Quo

After a first ballot being cast, 3 votes for Plan AXI(5%) were cast, 1 vote for Plan #5 was cast, and 3 votes for Status Quo were cast.

Since there was a tie, a second ballot was taken with members only being allowed to choose between Plan AXI(5%) and Status Quo. Status Quo was voted by the Committee 4-3.

## **II. The Plans**

1. Two-Rate 10% Shift - See Section 6 of Schedule A attached hereto for a detailed explanation of this model.

2. AXI(\$50K) - See Section 6 of Schedule A attached hereto for a detailed explanation of this model.

3. AXI(5%) - See Section 6 of Schedule A attached hereto for a detailed explanation of this model.

4. AXI + Two Rate (50K/10%) - See Section 6 of Schedule A attached hereto for a detailed explanation of this model.

5. Plan #5 - under this plan, there would be two different mil rates; one for properties that were classified as "land with improvements," and one for properties that were classified as "vacant land." The mil rate for "vacant land" would apply a multiplier to the mil rate for "land with improvements" so that "vacant land" paid at a higher rate.

The general rule of all five (5) models was to be "revenue neutral." Revenue neutral means that the resulting tax income will satisfy municipal budgetary needs. It does not mean that individual property owners will not realize a tax burden shift.

### III. Designated Geographic Areas

The Committee discussed implementing LVT only in certain geographic areas (i.e. Central Business District #1 and Central Business District #2). It was determined by the Committee that if LVT was going to be applied to the City of New London, that it would be applied and implemented City-wide.

### IV. City Wide Impact Study

A one-year city-wide impact study of the 2008 grand list comparing property tax under the current system with projected property tax under the land value taxation system was prepared (a copy of this full spreadsheet is in electronic form on the CD accompanying this report). This report included all properties, including properties that are tax-exempt.

Additionally, the information was broken down into reports for each of the first four (4) LVT models based upon the change in taxes in year 1 for all properties under each model. Portions of these reports showing the approximately top 500 increases and decreases under each of the first four (4) LVT models are attached hereto as "Schedule A." These reports included all properties, including properties that are tax-exempt. Copies of the full spreadsheet reports are in electronic form on the CD accompanying this report.

Spreadsheets and reports were not prepared for Plan #5 since this plan was proposed later on during the process. However, data was compiled indicating all properties in the City designated as vacant land, vacant land with some type of out-building or minor improvement (i.e. paving or shed), excess, or parking lots on the 2008 grand list. This report included excess land and beaches, and therefore includes lots that are deemed unbuildable. This report excluded vacant land owned by tax-exempt entities, and therefore only included taxable lots. A copy of this report is in electronic form on the CD accompanying this report, as well as attached as part of "Schedule A."

## V. Conclusions of the Committee

After analyzing each of the proposed LVT model, as indicated in Section I above, it is the Committee's recommendation and conclusion that LVT not be implemented in the City of New London. While the Committee recognizes the potential benefits to LVT in particular areas, and perhaps in other municipalities, after researching the models and reviewing the potential tax implications on the individual properties in the City, the Committee determined that the City has too many unique parcels and businesses to benefit from any impact that LVT may have. Specifically, the Committee had the following issues:

1. Since it was the consensus of the Committee to apply any LVT plan City-wide and include residential properties, the overall effect of LVT was diminished and/or reduced.
2. LVT may motivate the development of larger, vacant parcels of land. However, most of the largest vacant parcels of land located within the City of New London are currently owned by the City or an agent of the City, the New London Development Corporation. Therefore, LVT would not have any impact on the development of these large vacant parcel, but would still effect all properties within the City.
3. The number of vacant parcels that are privately owned, that are considered "buildable," and are not currently being put to any use, were too small and few in numbers for the Committee to consider or justify changing the current tax structure. The negative impact on the majority of the City for targeting these few privately owned vacant parcels was not seen as beneficial overall.
4. Under a majority of the LVT models, the top 250 properties whose taxes would increase are already being put towards uses (commercial or otherwise) that seem to maximize the properties. The effect of having their taxes increase in order to implement LVT seemed counter-productive. Some examples of this are as follows:
  - a. The City has a number of new car dealerships. Under the LVT models, these businesses, and other businesses, are "penalized" with higher taxes because they have large parking lots for their inventory and other uses. The concern of the Committee would be that increasing their taxes under an LVT model would be, in effect, forcing established businesses to relocate out of the City and sell their properties to someone who would change the use.
  - b. Some of the larger apartment buildings downtown would have their taxes increased despite the fact that their properties are already maximized in terms of lot coverage, height, and number of units.
  - c. The larger shopping centers in the City were impacted negatively under several LVT models because of the size area of their parking lots.
5. The Committee did not see the logic in attempting to implement LVT in this economic climate. If developers are unable to get financial backing for their projects, the fact that any development or

improvement they build may not be taxed at the existing rate under LVT would not matter.

6. The City already has other tax abatement programs (i.e. City and Town Act, Enterprise Zone) as incentives to private development within the City. While LVT is typically used to offer the same incentives (i.e. to develop), the negative impacts on properties for implementing LVT outweighed using it as an incentive rather than the existing programs.
7. The Committee was concerned that if LVT was implemented and subsequently rescinded, properties that began operating under LVT could suffer large increases in assessed values to their detriment.

**In conclusion, it was the Committee's determination that LVT is not a model of taxation that can benefit the City of New London, its taxpayers, and its citizens. It was determined that the current system was a better alternative than the five (5) LVT models presented.**

## **VI. Anticipated Time Table for implementation**

Not Applicable

## **VII. Legal & Administrative Issues**

- A. Legal Considerations – The Committee identified these legal considerations if LVT was to be implemented by the City of New London:
  1. A shift of tax burden onto the land may lead to the potential for legal action against the city based upon the perceived violation of taxpayers' individual land rights.
  2. Separating land and building values may result in the potential for an increase in the number of assessment appeals/court cases brought against the City based solely upon the land value.
  3. Possibility of either a reduction in PILOT payments to the City for exempt parcels receiving abatements or legal issues resulting from the exclusion of exempt parcels from abatement application.
  4. Legal action brought against the City of New London from the largest current taxpayers whose tax bills would increase dramatically under an LVT model based upon the legality of LVT under the State of Connecticut Constitution.

B. Administrative Considerations -- With the help of the City Assessor's Office and Tax Collector's Office, the Committee identified the following administrative issues if LVT was to be implemented:

1. Appraisal software and possible tax assessor and tax collector administrative software package programming change to accommodate LVT model.
2. Tax assessor and tax collector software programming change to accommodate differentiated mill rates.
3. Impact of public relations on Assessor's Office -- fielding increased questions, concerns, etc. of taxpayers.
4. Increase in administrative parcel changes due to the implementation of the vacant land tax - i.e.) taxpayers seeking to avoid an increased mill rate will combine adjacent lots and/or refute buildable status to realize an assessment decrease.
5. Estimated cost for all required programming changes.
6. Potential for the addition of temporary office help in the Assessor's office to assist with mailings and telephone inquiries.
7. Increased administrative costs to address anticipated increase in land valuation appeals resulting from property tax increases due to land value tax implementation.
8. Costs of conducting required taxpayer educational workshops.
9. Costs of mailing land value tax written explanations to all real property owners City-wide.

## SCHEDULE A

- Section 1: Abridged list of properties with changes in current taxes under AXI model.
- Section 2: Abridged list of properties with changes in current taxes under AXI (two-rate blend) model.
- Section 3: Abridged list of properties with changes in current taxes under AXI (5%) model.
- Section 4: Abridged list of properties with changes in current taxes under Two-rate model.
- Section 5: List of vacant lots within the City of New London.
- Section 6: Definitions of the first four (4) LVT models.
- Section 7: LVT Criteria Values Rankings and Scores.

SCHEDULE A

# LVT Model Explanations

## for New London

The proposed Land value Taxation (LVT) pilot for New London is intended to be a long term program which will, all things being equal, have its greatest impact after about ten years from implementation. Some discernable, positive changes are likely to become apparent as the pilot approaches its fifth year. Metrics for the pilot, which will allow all New London stakeholders to evaluate its impact and determine if it is achieving the goals for the pilot must be in place prior to implementation to assure the ability to gauge year-to-year changes.

Land value taxation has been applied in a variety of ways in the United States and in other countries around the world. Regardless of how LVT has been implemented, however, the ultimate goal or intent is the same: move the burden of property taxation away from capital and labor investment (i.e. improvements in buildings) to the land. The shift of taxation away from buildings to the land allows for increased economic activity that benefits from a reduced tax burden on buildings while providing the municipality the revenue necessary to run the city from the taxes derived from the increasing value of the land. LVT makes explicit a reality often ignored in cities (defined by density more than total population), which is the ability of municipalities to impact the density of use and value of its relatively scarce land by the investments it makes, in infrastructure, transit, and complementary zoning and other regulatory activities. In this fashion LVT increases the opportunity to generate the revenue necessary to produce the relatively higher education, safety, social, and cultural desires of urban businesses, commerce, and populations.

The four model options produce differences in their short term outcomes. These differences provide the NL LVT Committee and the City Council with a set of selection options to increase the likelihood LVT can be implemented with the widest base of stakeholder support. All models are applied using a revenue neutral formula (each produces the same total revenue) and are phased in using an incremental approach guided by annual budgets and other economic factors for a particular fiscal year.

### **Two-Rate 10% Shift:**

**Two-Rate** is a way of taxing land using a change in tax rates. For example, a drop of 10% in the building tax rate would require that this revenue loss be made up by an increase in the tax rate on land values. The direct effect is to put a greater reliance on land rather than buildings. Increasing taxation on land while simultaneously reducing taxes on buildings begins to remove the present disincentives to building improvements and/or denser land use traditionally caused when taxation is primarily based on

building values. The shift as it is carried out over time is more progressive than the current system, and heavily incentivizes vacant land into better use.

Impact:

- Increases taxation on vacant/blighted property.
- Mixed to positive effect on residential sector.
- Relatively easy to implement. Helps commercial downtown.
- Most likely to result in capital investment and construction at a quicker pace.

(Harrisburg, Pittsburgh and Allentown suggest quicker placement of business in new or existing buildings within the three to five year scenarios that have been measured.) ??

### **Assessment Exemption on Improvements - AXI (\$50K)**

Put simply, a blanket permanent abatement of a certain dollar amount on all buildings is put into effect. The overall tax rate then rises accordingly; with a greater impact on land value. For example, if someone's building is worth \$50,000 and the AXI is \$50,000 then they will pay no tax on the building. If the building is worth \$500,000 then the owner would pay tax on \$450,000. This has the effect of sometimes dramatically reducing tax burden on lower valued properties, most often residential properties. In New London, it would provide immediate and substantial tax relief to homeowners, from poor to upper middle class. By that measure it is a model with much vertical equity<sup>1</sup>.

The flat amount AXI approach shifts the tax burden to those properties with either the ability to pay, or the capacity to build and profit from what is now fallow or under-utilized/developed land.

Impact:

- Flexible model permits fast or slow phase-in.
- Less onus on vacant and blighted property.
- Increased taxation to Pfizer and open lots.
- Dramatic positive effect for homeowners and residential in general. Very progressive in terms of vertical equity.
- Tax relief for both small business and residential owners is achieved.
- Vacant sees smaller increases, but the phase-in can increase this.

---

<sup>1</sup> Vertical equity usually refers to the idea that people with a greater ability to pay taxes should pay more.

## AXI 5%

Instead of a set dollar exemption/abatement (i.e. previous model), the methodology is to reduce the building value by 5% across the board. The effect is different from the flat AXI, as shown by this example: a house with \$50K in building value would see a reduction in building tax by \$2,500, while a house worth \$500K in building value would see a reduction of \$25,000. The outcome is less progressive<sup>2</sup> than the flat AXI, and indeed may benefit those with a higher ability to pay.

### Impact:

- A very slight shift in taxation.
- No evidence of use elsewhere.
- No help to residential.
- Little help to commercial.
- Some shift to vacant.

(NOTE: from Center for the Study of Economics: We believe that a larger phase-in may be beneficial, but may be too difficult to understand, as the abatement will be different for each property. Not recommended.) ??

## AXI (50K) then Two-Rate

This is a blending of the two-rate and flat AXI (\$50K). It is a combination of AXI (which provides vertical equity and fairness) to LVT, which shifts taxation to those with a greater ability to pay; or who are not using land holdings for private or public benefit. This hybrid model reduces the large residential savings, but also ensures a higher holding cost for the vacant lots and underused properties which abound in New London.

### Impact:

- While easily automated, it may cause some short-term communication issues when answering tax payment questions.
- The tax savings of AXI are replicated, and high-valued land pays much more of its fair share across the jurisdiction.
- Vacant land sees a notable increase
- Residential and small business appear to benefit.
- Like two-rate as a standalone, development is more likely in this scenario in a tighter time frame.

---

<sup>2</sup> A progressive tax is a tax imposed so that the effective tax rate increases as the amount to which the rate is applied increases.

**All of these models are just that.** They simulate actual outcomes using the grand roll provided. Actual implementation may be phased-in at whatever pace the elected officials who will make the decision at budget time decide
